

## SOURCING SUSTAINABLE FEEDSTOCKS IN STADE UNDER ISCC PLUS

*This sustainability story is one of many that shows how Olin products, technologies, ideas, and people are having a positive impact on our world.*

### SUSTAINABILITY CHALLENGE

- Olin is committed to continuously improving energy efficiency and lowering our direct and indirect emissions.
- An efficient and comprehensive approach includes identifying ways to support our customers on their journey to a lower carbon future.
- A large portion of a company's total carbon footprint comes from raw materials.

### POSITIVE IMPACT

- Olin is certified to process lower carbon footprint feedstocks in Stade under the [ISCC PLUS requirements](#), and can offer certified lower carbon products to its customers.
- We make a positive environmental contribution to our customers and to the planet.

### OLIN'S SOLUTION

- The Olin team in Europe assessed the possibility of integrating bio and renewable feedstocks and developed ways of processing "green" raw materials for our Epoxy portfolio.
- This process was validated and certified PLUS by the International Sustainability and Carbon Certification (ISCC), an independent multi-stakeholder initiative and leading certification system supporting sustainable and climate-friendly supply chains.

### DID YOU KNOW?

Olin is committed to finding new ways to reduce our power consumption, increase operating efficiency, recycle materials, and conserve natural resources. Learn more in the [Olin Sustainability Report](#).
