AES/32 Software

AES/32 is a niche source to pay cloud-based platform for labor and services procurement enabling clients and suppliers to seamlessly collaborate through all stages of project planning to payment for asset intensive operations.

Value Proposition

Standardized processes to manage contracted workforce effectively.

- Transparency in labor and material cost, eliminating hidden fees and uncontrolled spending

- Enforced compliance through 100% alignment of rates to negotiated terms and conditions

- Minimized administrative tasks focusing on core value add activities

- Real time visibility of completed and in progress work

- Create, send, approve, and track invoices with the push of a button

- Keep documents and contract information accessible for years to come

- Notify users of differing contract prices and supply visual aids to show previous price trends

External Connecting Systems

Suppliers will have the ability to submit time worked and materials accrued directly in AES/32 or by uploading the information from an external network. AES/32 provides the ability to upload timesheet information from an external supplier network (i.e. JD Edward, PeopleSoft), only after Olin has approved timesheet. Details regarding this functionality will need to be determined directly with the supplier during the supplier enablement phase. Users will be subjected to AES/32 license fee.

Invoice Process

AES/32 system allows for self-billing in the form of evaluated receipt settlement (ERS), invoices will be created based on good receipts and automatically created in SAP. ERS eliminates invoice variances and reduces work. Self-Billing through ERS will be used as part of the AES/32 solution. A pre-requisite for successful self-billing with AES/32 is that the supplier is fully ERS enabled
